SECURITY ESSEN 2018

In Essen (Germany), from 25 to 28 September took place Security Essen and once again Tecnosicurezza was exhibiting with its own booth.

For those in the security industry, Security Essen needs no introduction, because it is one of the biggest global fair for the security industry.

The 2018 edition of Security Essen did not disappoint expectations, 950 exhibitors from 43 countries showed their products to over 36,000 trade visitors from 125 nations. Around 40 percent of the visitors came from abroad (8% up).

Tecnosicurezza was present with all its product lines and the fair was also an opportunity to present one novelty, DyamaWeb, a web based solution for the management of the One Time Codes. More information will be given in the following article of this newsletter.

In addition to being a showcase for products and a way to acquire new prospects, Security Essen was also an opportunity to strengthen relationships with existing clients and business partners.

As for the previous editions, we can affirm that also this year the fair has been a success for us and for this we would like to thank all of you who have come to visit us, it was a great pleasure to meet you.

The next edition of Security Essen will take place on 4 days from Tuesday 22 September to Friday 25 September 2020 and we look forward to seeing you there!

DYAMAWEB

The One Time Codes (also called Dynamic Codes) are the best way to raise the security level in all applications where more people have the need to access the same safe (Cash In Transit personnel, technical maintenance personnel, etc.).

With this system, without any physical connection between computer and locks, it is possible to create a 9 digit opening code valid for a single use. The validity of the code ceases when the lock is open or at the pre-set expiry date.

Already for many years Tecnosicurezza has in its catalogue a solution, based on the software Dyama, for the use of One Time Codes with MiniTech and TechMaster safe lock systems. Now we have launched a new, more advanced software with innovative features that brings many benefits.

The new software, DyamaWeb, is installed on a Linux server and relies on a database SQL Server Express. The application is accessed by a web-browser and its user interface is very user friendly, this minimizes the time it takes to learn how to use the system.

Together with the DyamaWeb software, it comes an application, DyamaApp, for the Android mobile devices. The main advantages of this new solutions are:

- Money saving:** one Time Codes can be generated in mobility, so it is no longer necessary to have an operator dedicated to this task.

- Security:** Taking advantage of the GPS capabilities, you can optionally choose to allow the generation of the One Time Code only when the mobile device is within a certain range from the safe.

- Accessibility:** Multiple devices can access the application at the same time, allowing multiple users to operate simultaneously.

- Reliability:** The system is based on a reliable database such as SQL server express on a Linux server. If necessary, the system can be made redundant.

- Flexibility:** DyamaWeb can be interfaced with third-party systems, allowing the integration of the One Time Codes directly into your own software.

For more information on the product or a demonstration, do not hesitate to contact our sales department.

TECNOSICUREZZA JOINS ESSA ASSOCIATION

With a view to being more and more involved in the physical security industry, from this month Tecnosicurezza has joined Essa association.

The European Security Systems Association (ESSA) is the leading association for physical security products providing protection against burglary and fire as well as for high security locks – at European and international level. ESSA offers the international security industry a global platform for the exchange of experience between users, insurers, public authorities and manufacturers. In addition, the ESSA represents the interests of its members in a wide variety of international committees and publishes press releases on topical security-related subjects on a regular basis.

As a new member, we are sure we can benefit a lot from this association and at the same time we are delighted to be able to give our contribution to the industry, on the strength of what we learned in more than 35 years of presence in the industry.
